Dear James,

Effective immediately, Nexans is pleased to announce the approval of the DSX-5000 for Class EA / Category 6A testing. This approval is based upon evaluation of the DSX-5000 tester versus network analyzer by Nexans Labs.

Nexans has carried out comprehensive testing of our LANmark-6A product range with the DSX-5000 tester in combination with the Class EA Channel and Class EA Permanent Link Adapter.

For both test solutions we found a high degree of repeatability and agreement with the results from our laboratory test equipment. The observed accuracy is better than the proposed Level V.

DSX-5000 is approved for use in permanent link certification testing with all of our Category 6A/Class EA, Category 6/Class E and Category 5e/Class D system warranties.

DSX-5000 is approved for use in channel certification testing with all of our Category 6A/Class EA, Category 6/Class E and Category 5e/Class D system warranties.

We will be notifying our global authorized installers of this approval and will update our Field Testing requirements to include the DSX-5000.

We look forward to a continued cooperation with Fluke Networks and extending this approval to our Class F and Class FA product ranges.
